

Went to construct forests $T_0 \subseteq T_1 \subseteq T_2 \subseteq G$ s.t. connected components of T_n are K_n -blocks.

Given T_0 , let $Y \in X/K_1$, where $K_1 := H_1 \sqcup H_2$. H_0 is nested, so each Y/H_0 (which is $\cong Y$ since each $(K_0\text{-block}) \cap Y$ are singletons) is a tree, which looks like $\bullet - \bullet - \bullet$.

Given T_1 , let $Y \in X/K_2$. Each Y/K_1 is a tree (looks like \bullet where each $\bullet = \{\bullet - \bullet - \bullet\}$)

Given T_2 , $K_3^* = \emptyset$, so $X/K_3 = \{X\}$, so $Y = X$.
